

**NOVEL ANTIANGIOGENIC PEPTIDE AGENTS
AND THEIR THERAPEUTIC AND DIAGNOSTIC USE**

ABSTRACT OF THE DISCLOSURE

5 The current invention concerns novel antiangiogenic peptides which correspond to about 10
to about 150 consecutive amino acids of N-terminal sequences of human growth hormone, human
placental lactogen, human growth hormone variant hGH-V, and prolactin, and their use in inhibiting
angiogenesis and in the diagnosis of diseases of human pregnancy involving abnormalities of
placental vascularization.
